

Rate of Fentanyl-Involved Fatal Overdose by Town of Residence, 2018

Source: Office of the Chief Medical Examiner

Description:

Rates were calculated per 100,000 population for each CT town (2018 total population counts were used). This mapping was based on the town of residence of the deceased. Of note, Fentanyl-involved death is not exclusive of other substances. Crude rates were calculated without adjusting for age.
